Provider Profile	20

Report Author: Craig Baty

The Microsoft Cloud Ecosystem in Australia is characterised by both changes and opportunities.

The ecosystem of Microsoft-certified service providers continues to evolve in Australia and globally, in tandem with changes in the Microsoft product sets across Microsoft 365 Services Managed Services for Azure, SAP on Azure, Dynamic 365, and the Power Platform.

Enterprises are accelerating investments in digital transformation for rapid, measurable results. Large IT consulting practices are witnessing an industry shift from IT-centric to customer-centric approaches and are increasingly focussing on improving end-user experience to optimise business outcomes. Data-driven, industry insights are helping to personalise end-user experience. Concurrently, the Australian business sector and the Australian government are accelerating cloud implementations. Organisations are looking to

leverage the potential of Microsoft's security capabilities within the Microsoft 365 suite of services.

Microsoft is responding to organisations' increasing focus on EX through Viva and is continuing to innovate in this area. At the same time, an increasing number of large consulting firms are noting that customers are keen on tapping into their data to enhance workplace experiences.

The Microsoft ecosystem is helping to empower employees to work from anywhere, enabling connectedness in the new hybrid working model. The growing trend of remote work and complex requirements of organisations wanting to collaborate internally and with clients is driving the widespread use of Microsoft's Teams and Viva platforms.

The global cloud market is becoming increasingly competitive as global MSPs are using high levels of automation to squeeze margin gains. In this scenario, investments must be increased to remain competitive. The Australian market is experiencing increasing competition from local providers, with many

Key Microsoft
service providers in
Australia are global,
but **able local**
names also exist.

beginning to challenge their larger, global counterparts. This trend is expected to only gain momentum over the next five years, with competition intensifying further.

Microsoft continues to evolve its AI development and implementation strategy across Azure, with growing interest in its use to augment human productivity. This is beginning to result in some level of differentiation of Azure implementations offered by MSPs and will result in an acceleration in the use of AI in Microsoft Azure platforms over the next few years. In this context, the use of intelligent, conversational AI to augment human abilities in various tasks is predicted to grow strongly over the next five years.

Customer expectations and demands with regards to the broader IoT landscape and requirements for advanced data analytics continue to grow rapidly in Australia as in the rest of the world. Over the next few years, Australian MSPs need to increasingly invest in AI-related capabilities and training to retain high levels of Microsoft Azure certifications and foster related partnerships.

The SAP on Azure market is highly specialised, with providers requiring specific skills. Australian customers are demanding strong knowledge and relevant certifications from their cloud partners. Although Microsoft Azure entered the cloud space three years after AWS, Microsoft has been able to leverage its brand recognition and strong partnership with SAP to establish a strong foothold.

Concurrently, there is now much focus on app-driven modernisation of the cloud. It is taking centre stage amongst Australian Microsoft Azure implementations as organisations embark on the next wave of cloud. This is making it a challenge for cloud service providers to realign their offerings. It requires an amalgamation of IP and fit-for-purpose tools to address issues related to legacy systems. At the same time, the traditional cloud managed services model too is facing an increasing number of challenges. The market is becoming highly competitive as global providers are using high levels of automation to save their margins and capture market share, which requires continuous investments to remain competitive.

Over the next 1-2 years, a range of new value-adds is expected to enter the Australian Dynamics 365 market in areas such as cloud migration, micro-verticalized Dynamics solutions, customer analytics and insights offerings, and the PowerApps factory. MSPs are noting increasing opportunities around some traditional Dynamics 365 modules that are evolving with new technologies such as IoT and remote assist around field service, project operations, dynamic marketing, and omnichannel offerings in customer service. COVID-19 saw the rapid scaling of some Azure projects due to the trend of remote working. It also accelerated the need for Australian clients to become more agile and focus on reducing costs, which has driven a greater adoption of a few cloud applications and seen more workloads move to the public clouds.

However, the challenge of an inadequate number of cloud-certified people and expertise in Australia persists related to certain technologies such as cyber security, IoT, and AI as client demands continue to rise. While it is still early days, Australian clients

will increasingly focus on realigning legacy applications to leverage data, insights, ML, and AI. The growing proliferation of digital touchpoints and unprecedented growth in technologies related to consumer segments such as wearables will provide Australian MSPs with strong opportunities over the next few years.

Microsoft 365 services involve the design and application of processes to support personalised employee experience, workforce productivity, collaboration, and innovation. It comprises traditional Microsoft products such as Office, Excel, PowerPoint, and SharePoint and newer collaboration tools such as Teams, OneDrive, Power Automate, and Power BI, in addition to enterprise mobility and security and Azure Cloud for data storage and backup.

Many consulting firms are seeing a huge demand for security implementation services for Microsoft 365. This trend is providing a significant opportunity for the adoption of Microsoft 365 E5 with its enhanced security features. Clients are looking at maximising

the use of their E5 license for advanced threat protection to displace legacy voice systems and migrate to Teams calls.

Clients are moving away from customised implementations, which are fragile and expensive to implement and maintain. With Microsoft offering starter templates and blueprints, consulting firms are able to implement complex solutions in a fraction of time and cost and move clients onto Microsoft 365 services more quickly than before.

Following the reshaping of Australian businesses because of COVID-19, many companies now have hybrid workplaces, with their workforce spread across office and work setups at home. Thus, collaboration solutions are needed to bridge the two environments. This requires revisiting the way meetings, information sharing, and application integration take place and ensuring that the integration of these aspects is done seamlessly. New virtual and virtual/physical hybrid teams and processes need agile technology deployments to function, and Modern Workplace 365 addresses these requirements by stitching together

the Microsoft 365 tools with enterprise-wide applications and services to support the new post-COVID-19 normal.

The SAP on Azure market is highly competitive, with providers requiring specialised skills/knowledge to deliver high-quality services. Australian customers are demanding that their cloud partners attest this knowledge with related certifications, especially with the complex requirements of SAP on Azure.

COVID-19 and ransomware attacks have resulted in accelerated cloud adoption amongst some Australian organisations. Many are now willing to migrate their business-critical proprietary systems to the cloud, providing added opportunities for Australia-based Azure providers.

The market for SAP on Azure services in Australia continues to grow as more Australian clients look to migrate from their on-premises server environment to the cloud. Many have attained a relatively mature cloud adoption status due to the high use of cloud-based technologies.

Many Australian companies have already migrated low to medium-complex applications to the cloud and are now positioned to migrate the more complex ones such as SAP to the public cloud. At the same time, some Australian organisations are yet hesitant to migrate these high-impact critical business applications. Cloud providers in Australia need to continue to educate the market on how migrations of large complex workloads such as SAP on Azure cloud can be done with relative ease and involve low risk.

SAP has aggressively moved to embrace the cloud, driving the SAP on Azure market both in Australia and the rest of the world. It has undertaken the restructuring of its core business model, partnerships, development and support, much like other large-scale enterprise business management software providers such as Oracle and IBM. The rate of SAP on Azure implementations has recently accelerated as SAP has globally announced the end-of-life for legacy, on-premises development and support. Microsoft's Dynamics 365 platform continues to evolve at a very rapid pace. The market has

recently seen the introduction of new products and significant shifts in existing applications as the platform continues to evolve. MSPs are responding to the trend of an amalgamation of technologies across ERP, CRM, dataverse, and digital services on the periphery of the Dynamics 365 product set as it evolves to increasingly become modular and seamlessly connected.

Customer experience, and the need to personalise it, is a primary driver for Dynamics 365 initiatives as smart businesses seek to offer customers a variety of ways to connect (omnichannel CX), to capture customer data at every touchpoint, and leverage the same using AI and ML. Dynamics 365 service providers in Australia are now integrating technologies such as AI-powered chatbots and RPA to continually enhance CX.

The key providers in the Dynamic 365 landscape in Australia are global MSPs, however, more Australia-based providers are now emerging, and some are gaining global recognition. MSPs in Australia will need to innovate and develop custom solutions that will offer agile

and flexible systems that empower companies to optimise resources with IoT integration and result in zero downtime in the back-office space. The addition of the Power Platform and customer insights requires staff to have new and different skill sets beyond traditional Dynamics 365 offerings.

Clients now are looking for secure networks that primarily support remote employees to work on Teams, backed up by collaboration tools and business applications that help deliver exceptional CX.

As the Australian market moves into a true hybrid work-from-anywhere environment, the need for access to a safe, secure cloud environment, coupled with an increased demand for automation of applications, has led to growth across all five service offerings for Microsoft covered in this study.

This study focuses on what ISG perceives as most critical in 2023 for **Microsoft Cloud Ecosystem**.

Simplified Illustration Source: ISG 2023

Definition

Microsoft is one of the most established technology providers in the world. It has a network of thousands of partners, which augments its capabilities to aid enterprises in adopting its technologies. This network has been through a series of shifts in the past five years, as Microsoft changed itself as part of a massive cloud transformation. In the same period, digital transformation has become a priority in the enterprise technology landscape, requiring a new generation of software and services from Microsoft and its partners.

To address these needs, Microsoft has honed its focus on three core areas: the Azure cloud platform; the Microsoft 365 suite of productivity experiences, which includes Windows 10 and 11 and Office 365; and the Dynamics 365 suite of business applications. Partners are now evaluated on their ability to drive the use of Microsoft cloud services that comprise these core product lines. To succeed, service providers must offer enterprises a robust set of services that are complemented by forward-thinking capabilities and backed by a strong relationship with Microsoft. Providers should

demonstrate a keen awareness of future developments in the Microsoft clouds and show an ability to drive innovation and client business opportunities using the Microsoft suite of products and services.

ISG's analysis focussed on how providers in Australia, Brazil, Germany, Singapore and Malaysia, Switzerland, the U.K. and the U.S. are positioned based on the strength of their respective portfolios and their competitiveness in the market. While there are thousands of providers delivering services for Microsoft products in each of these regions, this report will only focus on the top competitors, both global firms and local providers, for each of the quadrants studied by region.

Scope of the Report

In this ISG Provider Lens™ quadrant study, ISG includes the following five quadrants: Managed Services for Azure; Microsoft 365 Services; SAP on Azure Services; Dynamics 365 Services; and Power Platform Services.

This ISG Provider Lens™ study offers IT decision makers:

- Transparency on the strengths and weaknesses of relevant providers
- A differentiated positioning of providers by segments
- Focus on regional market

Our study serves as the basis for important decision-making in terms of positioning, key relationships and go-to-market considerations. ISG advisors and enterprise clients also use information from these reports to evaluate their existing vendor relationships and potential engagements.

Provider Classifications

The provider position reflects the suitability of ICT providers for a defined market segment (quadrant). Without further additions, the position always applies to all company sizes classes and industries. In case the IT service requirements from enterprise customers differ and the spectrum of IT providers operating in the local market is sufficiently wide, a further differentiation of the IT providers by performance is made according to the target group for products and services. In doing so, ISG either considers the industry requirements or the number of employees, as well as the corporate structures of customers and positions IT providers according to their focus area. As a result, ISG differentiates them, if necessary, into two client target groups that are defined as follows:

- **Midmarket:** Companies with 100 to 4,999 employees or revenues between \$20 million and \$999 million with central headquarters in the respective country, usually privately owned.

- **Large Accounts:** Multinational companies with 5,000 or more employees or revenue above \$1 billion, with activities worldwide and globally distributed decision-making structures.

Segmentation into Midmarket and Large accounts was not conducted for Australia due to the smaller scale of the market.

The ISG Provider Lens™ quadrants are created using an evaluation matrix containing four segments (Leader, Product Challenger, Market Challenger and Contender), and the providers are positioned accordingly. Each ISG Provider Lens™ quadrant may include a service provider(s) which ISG believes has strong potential to move into the Leader quadrant. This type of provider can be classified as a Rising Star.

Number of providers in each quadrant: ISG rates and positions the most relevant providers according to the scope of the report for each quadrant and limits the maximum of providers per quadrant to 25 (exceptions are possible).

Provider Classifications: Quadrant Key

Product Challengers offer a product and service portfolio that reflect excellent service and technology stacks. These providers and vendors deliver an unmatched broad and deep range of capabilities. They show evidence of investing to enhance their market presence and competitive strengths.

Contenders offer services and products meeting the evaluation criteria that qualifies them to be included in the IPL quadrant. These promising service providers or vendors show evidence of rapidly investing in products/ services and a follow sensible market approach with a goal of becoming a Product or Market Challenger within 12 to 18 months.

Leaders have a comprehensive product and service offering, a strong market presence and established competitive position. The product portfolios and competitive strategies of Leaders are strongly positioned to win business in the markets covered by the study. The Leaders also represent innovative strength and competitive stability.

Market Challengers have a strong presence in the market and offer a significant edge over other vendors and providers based on competitive strength. Often, Market Challengers are the established and well-known vendors in the regions or vertical markets covered in the study.

★ **Rising Stars** have promising portfolios or the market experience to become a Leader, including the required roadmap and adequate focus on key market trends and customer requirements. Rising Stars also have excellent management and understanding of the local market in the studied region. These vendors and service providers give evidence of significant progress toward their goals in the last 12 months. ISG expects Rising Stars to reach the Leader quadrant within the next 12 to 24 months if they continue their delivery of above-average market impact and strength of innovation.

Not in means the service provider or vendor was not included in this quadrant. Among the possible reasons for this designation: ISG could not obtain enough information to position the company; the company does not provide the relevant service or solution as defined for each quadrant of a study; or the company did not meet the eligibility criteria for the study quadrant. Omission from the quadrant does not imply that the service provider or vendor does not offer or plan to offer this service or solution.

Microsoft 365 Services

Microsoft 365 Services

Who Should Read This Section

This quadrant report is relevant to enterprises in Australia that are evaluating providers of Microsoft 365 services. This quadrant highlights the current market positioning of these providers and key challenges enterprises in this region face.

With the increasing demand for Microsoft 365 services across modern workspaces in Australia, providers are building more repeatable, robust solutions across IoT, cloud, and data warehouses. An increasing number of business applications across industries are being bundled with preconfigured solutions, scripts, and APIs to enable clients to assess their digital estates with minimal touchpoints.

With growth in connected devices and compliance mandates for the large volume of data moving to the cloud, edge security practices are on the uptake.

An increasing number of Microsoft 365 solutions are supporting environmental, sustainability, and governance (ESG) programmes that include smart device provisioning and hybrid work carbon consumption tracking capabilities.

IT leaders should read this report to understand the relative strengths and weaknesses of consulting and transformation service providers, which would help them lead digital transformation projects.

Workplace technology professionals should read this report to understand organisational change management (OCM) challenges and better evaluate potential partners for Microsoft 365 implementation and integration.

Knowledge management professionals should read this report to understand providers' positioning and the key trends in the provider ecosystem so they can identify potential partners.

**Microsoft Cloud Ecosystem
Microsoft 365 Services**

Australia 2023

This quadrant evaluates service providers that aid enterprises with the **adoption, integration, and ongoing operation of Microsoft 365**. Impacts of COVID-19 have dramatically increased the volume of **services required to support work from home**.

Craig Baty

Microsoft 365 Services

Definition

This quadrant evaluates service providers that aid enterprises with the adoption, integration and ongoing operation of Microsoft 365, Microsoft's SaaS-based productivity suite.

These services go beyond provisioning and migrating to Microsoft 365; they focus on offering a quick, device-independent, high-quality productivity suite that enables seamless teamwork, irrespective of location, and can adapt to the role of the user. From clients' perspective, Microsoft 365 is about collaboration and the integration of globally dispersed teams. To enable this, integration and implementation services are necessary. This quadrant also evaluates providers on the support they offer for Windows as a part of their overall Microsoft 365 service portfolio.

Implementing SaaS-based workplace environments is a challenge for every enterprise client. ISG notes a plethora of challenges around collaboration, unified communication (UC), file storage, performance, license cost, provisioning procedures and maintenance plans, as well as the efforts towards data

integration, process integration and application integration, among other processes. Providers in this space must be able to go beyond implementing Microsoft 365 at a basic level to address the challenges head-on.

Providers considered in this quadrant are required to perform assessment, consulting, and services and solutions to support clients with their digital journey. This requires clear and open communication in the respective region and unique selling propositions that go beyond providing workplace environments based on Microsoft's desktop and collaboration solutions.

Eligibility Criteria

1. Service portfolio includes **technical consulting, license purchases, integration of Microsoft 365 modules, implementation and operation**
2. Forward-thinking offerings that integrate with Microsoft 365 to create a modern workplace for enterprise clients, for example, HoloLens development and Teams bot creation
3. **Management of Microsoft Office APIs** to ensure appropriate use and increased enterprise productivity
4. Ability to **migrate customer workplaces to modern cloud environments and workspace-as-a-service models**
5. **Provisioning of Microsoft 365-based Unified Endpoint Suites** through integration with state-of-the-art identity and access management technology and mobile device management (Intune or others)
6. Strength of the **provider's partnership with Microsoft**, measured by the number and category of **relevant certifications** (including Office 365, Intune, Windows and Azure), **duration of relationship** with Microsoft and evidence of **strategic cooperation** between the provider and Microsoft around modern workplace

Microsoft 365 Services

Observations

Microsoft 365 services involves the design and application of processes to support personalised employee experience, workforce productivity, collaboration, and innovation. It comprises traditional Microsoft products such as Office, Excel, PowerPoint, SharePoint, and newer collaboration tools such as Teams, OneDrive, Power Automate and Power BI along with Enterprise Mobility and Security and Azure Cloud for data storage and backup.

Many consulting firms are now seeing a huge demand for security implementation services for Microsoft 365. This trend provides a significant opportunity for services and Microsoft 365 E5 adoption, with its enhanced security features. There is increasing interest among clients looking to maximise the use of their E5 licensing for advanced threat protection to displace legacy voice systems and migrate to Teams call and use all the enhanced security features within an E5 license.

Some significant changes took place in the market in 2022, and these are reflected in the quadrant. Of particular note is the successful

spinoff of Kyndryl from IBM; the former now appears in a similar (but slightly lower) position compared with IBM's position last year. IBM has, as a result, moved to the Market Challenger position. Capgemini has acquired local service provider Empired, thus strengthening its position into that of a Rising Star. Similarly, Fujitsu acquired a local service provider, oobe, which strengthened its leadership position in this space.

From the 175 companies assessed for this study, 24 have qualified for this quadrant, with 12 being Leaders.

accenture

Accenture & Avanade are leading providers of innovative digital and cloud services, business solutions and design-led experiences in the Microsoft ecosystem. Avanade's competitive strengths include its global reach, depth and breadth of capabilities, and the ability to execute.

Capgemini

Capgemini, is headquartered in France and operates across 50 countries. It recently acquired Australia-based MSP, Empired, thus significantly strengthening its local presence. It is one of the first Microsoft partners globally to achieve all six of Microsoft's new solution partner designations.

DXC TECHNOLOGY

DXC Technology provides a full range of services, including consulting, advisory, transformation, integration, and operational management in Australia. It is one of the few global system integrators (GSIs) to become a Microsoft Mixed Reality Gold Partner.

Fujitsu

Fujitsu is one of the most accredited Microsoft partners in the market. It has a global strategic alliance with Microsoft and is one of the Microsoft GSI partners. It has attained Gold level in all Microsoft competencies.

HCLTech

HCLTech is an Indian multinational IT services and consulting technology company that has had a strong presence in Australia for more than 20 years. HCLTech CloudSMART is an adaptive portfolio of innovative cloud services driven by automation and a robust partner ecosystem.

HEXAWARE

Hexaware is a global IT service provider, headquartered in India. It has a fast-growing presence in the Australian market. Hexaware offers an automated and a highly cost-effective Microsoft 365 service portfolio that is supported by highly advanced security solutions.

Microsoft 365 Services

Kyndryl

Kyndryl is the new name for IBM's managed infrastructure services business, which spun off as a separate company in 2021. It claims to be the world's largest IT infrastructure services provider. Kyndryl's expertise in major global markets is teamed with Microsoft's local capabilities to drive innovation and differentiated solutions for its clients.

Logicalis will continue to invest millions of dollars to support its cloud-managed services business with Microsoft to enhance its offerings through new product development, training, and obtaining new IP and expertise through acquisition.

TCS is one of the world's leading global IT services, consulting and business solutions companies, headquartered in India. It enables a contextual experience through the Microsoft 365 suite of capabilities to address workplace challenges.

Telstra is Australia's largest telecommunications provider and offers Microsoft services via its Telstra Purple division. In 2022, Telstra and Microsoft announced a new Australian strategic partnership that combines Microsoft's Cloud, Edge and Modern Workplace solutions with Telstra's network leadership and technology expertise.

Unisys

Unisys has a diverse global client base across the government, financial services, and commercial markets in more than 40 countries. It has more than 600 employees in Australia. Unisys partners with Lenovo, Dell, and Jabra to enhance EX and functionalities.

Wipro is a global IT, consulting, and business process services provider, headquartered in India and has a relationship with Microsoft that spans more than two decades. Wipro's Data Discovery Platform (DDP) covers the entire spectrum, from data to information to insights, thus empowering clients.

“DXC Technology works closely with Microsoft on the industrial metaverse and is also its Mixed Reality Gold Partner.”

Craig Baty

DXC Technology

Overview

DXC Technology is headquartered in Virginia, U.S. and operates in 70 countries. It has more than 130,000 employees across over 130 global offices. In FY22, the company generated \$16.3 billion in revenue, with Applications as its largest segment. DXC employs over 10,000 people across Australia and has a regional delivery centre in Adelaide. The company manages more than 6 million Windows PCs and Windows 365 Cloud PCs as a part of its Modern Device Management offering.

Strengths

Innovative Microsoft 365 and Teams offering: DXC has developed extensive capabilities to support flexible and seamless cloud migration and user adoption as a part of its Microsoft 365 and Teams offering. This includes assisting clients to modernise communications with the Teams call function. It has recently signed significant new business in this segment.

Strong uptake in a range of Microsoft 365 offerings: DXC has seen increased interest in its IP to help clients control Teams sprawl with a Power App for managing the lifecycle and governance of Teams. It is also experiencing increased interest for the Microsoft Power Platform and the Microsoft Viva EX platform.

Expansion of modern workplace offering:

DXC has expanded its security capabilities with Microsoft eXtended Detection and Response (MXDR) for the modern workplace and enhanced its security advisory and consultancy capabilities. With the proliferation of hybrid work, it is assisting clients with its smart workspaces, with Microsoft Teams Rooms (MTR) as a turnkey service.

Advanced experience platform capabilities:

DXC’s UpTime™, an EX platform, presents Microsoft 365 users with new features and capabilities, including enabling user access to productivity applications and Teams.

Caution

DXC Technology remains a leader in Microsoft 365 services market in Australia. Although it has continued to offer steady support to its clients since late 2020 and even ensured loyalty, the generation of net new clients has been slow. It may need to focus on a couple of specific industries to attract potential clients.

Appendix

The ISG Provider Lens™ 2023 – Microsoft Cloud Ecosystem report analyzes the relevant software vendors/service providers in the Australian market, based on a multi-phased research and analysis process, and positions these providers based on the ISG Research methodology.

Information Services Group Inc. is solely responsible for the content of this report. Unless otherwise cited, all content, including illustrations, research, conclusions, assertions and positions contained in this report were developed by, and are the sole property of Information Services Group Inc.

The research and analysis presented in this report includes research from the ISG Provider Lens program, ongoing ISG Research programs, interviews with ISG advisors, briefings with services providers and analysis of publicly available market information from multiple sources. The data collected for this report represents information that ISG believes to be current as of February 2023, for providers who actively participated as well as for providers who did not. ISG recognizes that many mergers and acquisitions have taken place since that time, but those changes are not reflected in this report.

All revenue references are in U.S. dollars (\$US) unless noted.

The study was divided into the following steps:

1. Definition of Microsoft Cloud Ecosystem market
2. Use of questionnaire-based surveys of service providers/ vendor across all trend topics
3. Interactive discussions with service providers/vendors on capabilities & use cases
4. Leverage ISG's internal databases & advisor knowledge & experience (wherever applicable)
5. Use of Star of Excellence CX-Data
6. Detailed analysis & evaluation of services & service documentation based on the facts & figures received from providers & other sources.
7. Use of the following key evaluation criteria:
 - * Strategy & vision
 - * Tech Innovation
 - * Brand awareness and presence in the market
 - * Sales and partner landscape
 - * Breadth and depth of portfolio of services offered
 - * CX and Recommendation

Partner and Global Head – ISG Provider Lens™

Mr. Aase brings extensive experience in the implementation and research of service integration and management of both IT and business processes. With over 35 years of experience, he is highly skilled at analyzing vendor governance trends and methodologies, identifying inefficiencies in current processes, and advising the industry. Jan Erik has experience on all four sides of the sourcing and vendor governance lifecycle - as a client, an industry analyst, a service provider and an advisor.

Now as a research director, principal analyst and global head of ISG Provider Lens™, he is very well positioned to assess and report on the state of the industry and make recommendations for both enterprises and service provider clients.

ISG Provider Lens™

The ISG Provider Lens™ Quadrant research series is the only service provider evaluation of its kind to combine empirical, data-driven research and market analysis with the real-world experience and observations of ISG's global advisory team. Enterprises will find a wealth of detailed data and market analysis to help guide their selection of appropriate sourcing partners, while ISG advisors use the reports to validate their own market knowledge and make recommendations to ISG's enterprise clients. The research currently covers providers offering their services across multiple geographies globally.
